Measurements

The Critical Hip Point (CHP):

The critical hip point is the position on your body where the hip rings of your Quasar II are designed to be located. The critical hip point is located at the top of your hip bone and slightly forward (see illustration). For a proper fit, it is imperative that you accurately locate this critical hip point and take careful measurements.

Make sure you are standing straight up when taking all measurements.

- Height _____
- Weight _____
- Sex _____

A - Torso

From the "V" between your collar bones to the critical hip point.

B - Shoulder

From the top center of your shoulder, straight down to the critical hip point.

C - Chest

Measure horizontally around the chest just under the arms

D - Waist

At belly button

E - Back

From left critical hip point to right critical hip point around the back.

F - Thigh (horizontal)

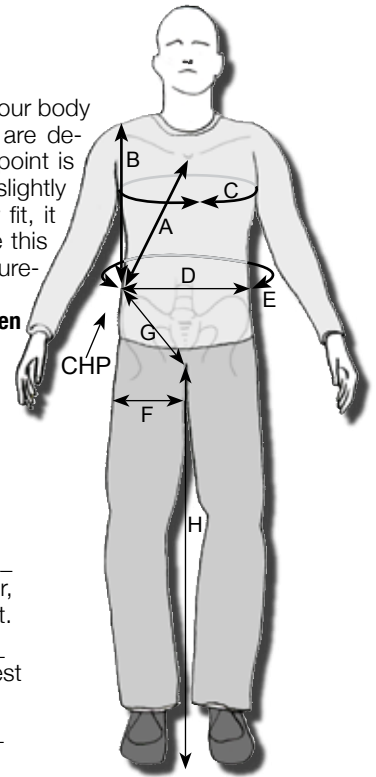

Measure horizontally around your thigh at the crotch

G - Thigh (diagonal)

Measure from critical hip point, through the crotch over the buttocks and back to the critical hip point. Imagine the measuring tape is your leg strap.

H - Inseam

From crotch to floor.
